EDUCATION

B.S Computer Science
California State University, Fullerton

08/2021 – 05/2025 | Fullerton, CA

SKILLS

- Languages: Python, C++, C#, HTML/CSS/Javascript, R, SQL
- Tools: Git, Visual Studio Code, Linux, Figma, Jupyter Notebook, AWS

EXPERIENCE

Quality Data Specialist | Bel Air Machine

05/2025 – Present | Santa Ana, CA

- Perform and review First Article Inspection Reports (FAIR) per AS9102 standards, ballooning engineering drawings and processing dimensional CMM data into ERP systems while interpreting GD&T callouts to ensure full AS9100 compliance.
- Balloon engineering drawings using HighQA Inspection Manager to establish accurate and organized inspection requirements.
- Maintained calibration schedules and records for precision inspection equipment using UniPoint software
- Support source inspection by preparing organized data packages and developing detailed inspection reports that reflect correct drawing and purchase order revision levels to prevent nonconformance.
- Leveraged JobBoss ERP system to monitor real-time job status and verify material readiness, audited outside service POs against routing stages to ensure process accuracy and support production scheduling
- Analyze inspection results and manage part serialization per engineering drawing requirements using advanced Microsoft Excel functions, identifying discrepancies and maintaining strict traceability throughout the product lifecycle.
- Facilitate clear communication between quality and production teams to ensure all documentation is delivered on schedule, supporting seamless operational workflows.

Clerk | Women in Cybersecurity

01/2025 – 05/2025 | Fullerton, CA

- Maintain chapter records, communications, and meeting minutes, ensuring accuracy and transparency.
- Organize and oversee organizational records for efficiency and compliance, including developing and delivering engaging workshops on cybersecurity topics for chapter members.

Data Annotator | Highbrow Technology Inc

11/2024 – 05/2025 | Remote

- Performed multimodal data annotation for Llama model training and evaluation, accurately labeling images and text based on specific guidelines to enhance machine learning model accuracy.
- Conducted quality assurance by reviewing annotations for consistency and correctness, ensuring high-quality training data for AI models.

Data Science Research Assistant

05/2023 – 05/2024 | Fullerton, CA

- Conducted in-depth research in foundational concepts of Data Science and Machine Learning, exploring key topics such as data preprocessing, algorithm selection, model evaluation, and interpretability.
- Designed and developed the Food Keeper Project, aimed at reducing food waste by building and implementing machine learning models to classify food-related content in social media and email messages.

PROJECTS

Multi-Camera Inspection Tool | Python, OpenCV

03/2026 – Present

- Built a multi-camera photo capture application for manufacturing/inspection workflows that replaced a \$20K motorized rotating-camera rig, cutting equipment costs by over 90%, by synchronizing simultaneous captures across low-cost fixed USB webcams with a single keypress.
- Developed the app's file-organization system for QA staff, eliminating manual sorting of inspection photos, by auto-organizing captures into part number/job number/serial number folder hierarchies with resumable, non-overwriting numbering.
- Built a GUI and packaged the tool as a standalone Windows executable, enabling console-free operation for non-technical operators on the shop floor, using Tkinter for data entry and PyInstaller for deployment.

CodeTech | React, Javascript, Python, Firebase

12/2024 – 05/2025

- Focused on refactoring existing codebases to enhance readability, maintainability, and performance.
- Implementing structured refactoring techniques to improve code quality.
- Analyzing inefficient code structures and applying best practices for modularity and scalability

Peerbox | React, Python, AWS

08/2024 – 12/2024

- Built a secure private cloud platform enabling students to upload, download, and organize files, with real-time collaboration features like commenting and version control.
- Integrated cloud storage solutions and search functionalities, enabling users to locate files quickly using metadata, categories, or keyword searches.
